

CORRECTION

Correction: The Circadian Regulation of Sleep: Impact of a Functional ADA-Polymorphism and Its Association to Working Memory Improvements

The PLOS ONE Staff

There is an error in [Fig. 4](#), “Accuracy patterns over time according to sleep pressure condition and genotype, separately for 3-back (upper panels) and 0-back (lower panels).” Please see the complete, correct [Fig. 4](#) and its legend here.

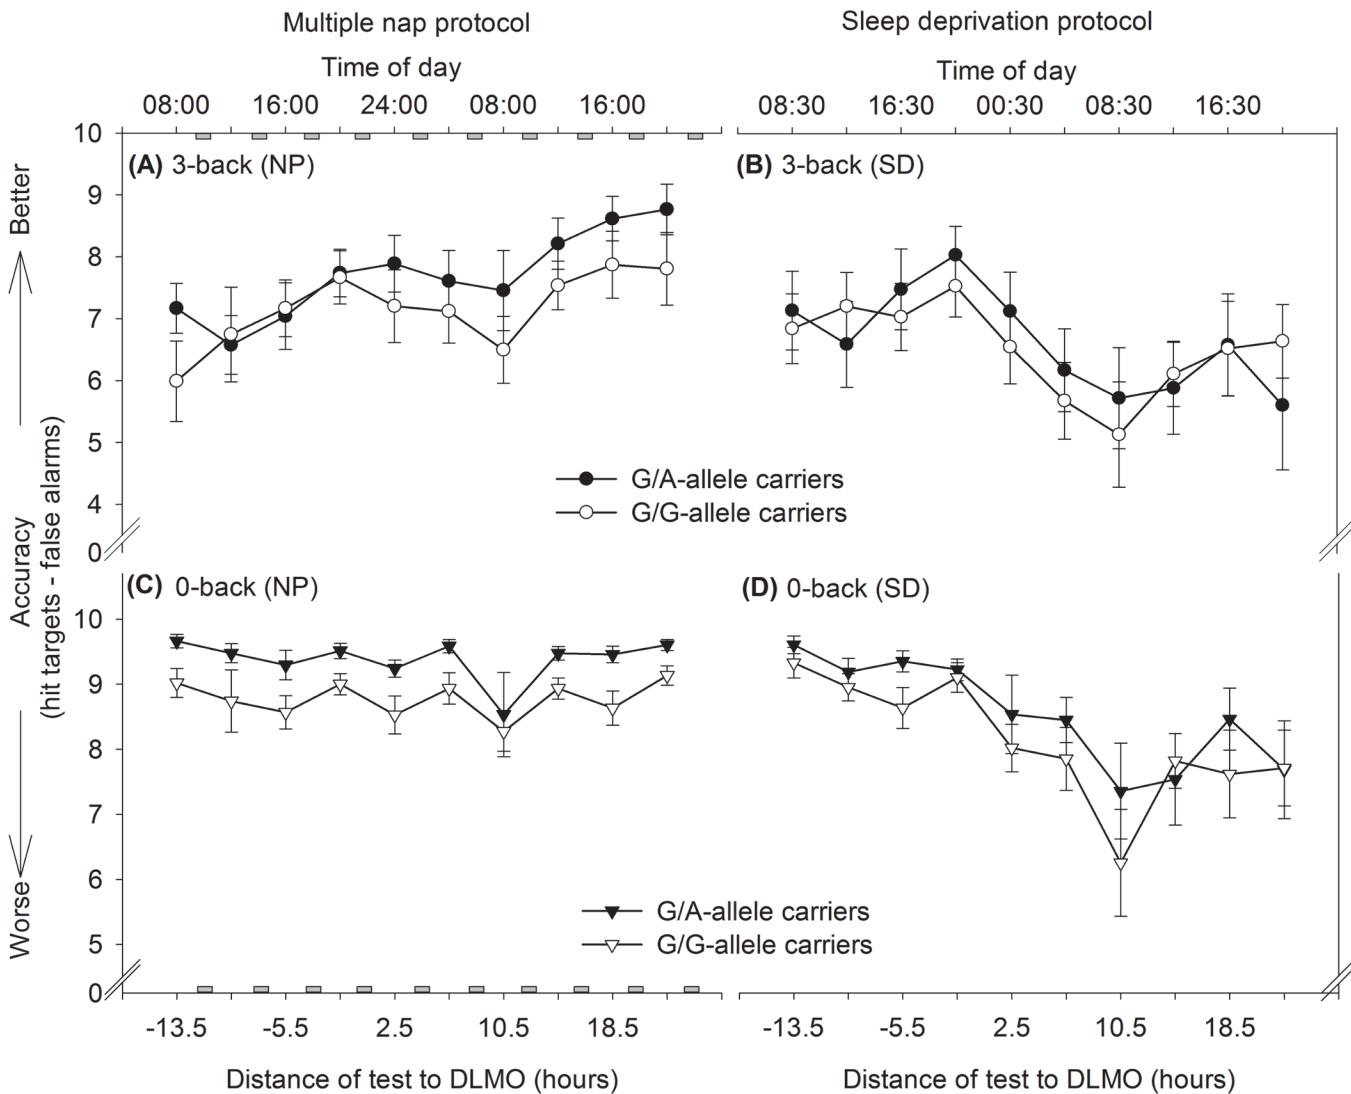

Fig. 4. Accuracy patterns over time according to sleep pressure condition and genotype, separately for 3-back (upper panels) and 0-back (lower panels). Accuracy was calculated by a difference ratio (hit targets—false alarms). Grey rectangles indicate scheduled nap sleep episodes. In the 3-back task, accuracy improved from the first to the last test in the nap condition (NP, [A], $F[9,183] = 11.66, p < 0.0001$; post hoc $p < 0.0001$), while the first and the last test did not significantly differ during sleep deprivation (SD, [B], $F[9,184] = 8.84, p < 0.0001$, post hoc $p > 0.1$). When working memory load was set to a minimum in the 0-back task (lower panels), accuracy remained stable from the first to the last test in the nap condition ([C], $F[9,183] = 3.65, p = 0.0003$; post hoc $p > 0.1$), but decreased significantly during sleep deprivation ([D], $F[9,184] = 8.62, p < 0.0001$; post hoc $p = 0.01$). G/A-allele carriers performed constantly at a higher level in the 0-back version compared to G/G-allele carriers ([C], $F[1,21] = 8.17, p = 0.009$), indicating differences in basic attentional resources between genotypes during the nap condition.
