

Suppl. Fig. S1

Supplementary Fig. S1: J774A.1 cells were left uninfected (lane 1 left and right panel) or were infected with deltaYopM(pYopM-CBP-SBP) and lysates were prepared 90 minutes after infection. Lysates were then incubated with 20 μ l of Streptavidine-sepharose or Protein A/G sepharose and the precipitates and aliquots of the lysates before immunoprecipitation were analyzed by western blotting with the indicated antibodies.
