

Table S1: DISC1 interaction partners included in the study, and evidence for their involvement in psychiatric disease

Gene ^a	Location	Function	Evidence for involvement in psychiatric diseases	References ^b
<i>DISC1</i>	1q42.2	"hub" protein ^c	- genetic evidence (cytogenetics, linkage and association) - reduced expression in postmortem brain from SZ and UP patients, and in cell lines from BP patients - impaired cognitive and behavioural phenotypes in humans and mutant mouse	St.Clair et al.[1]; Blackwood et al.[2-3]; Ekelund et al.[4-5]; Cannon et al.[6]; Callicott et al.[7]; Hennah et al.[8]; Hodgkinson et al.[9]; Saetre et al.[10]; Thomson et al.[11]; Kilpinen et al.[12]; Hashimoto et al.[13] Sawamura et al.[14]; Maeda et al.[15]
<i>ATF5</i> [25]	19q13.33	Signal transduction	- differential gene expression in lymphoblasts from MZ twins discordant for BP disorder	Kakiuchi et al.[26]
<i>FEZ1</i> [27]	11q24.2	Neurite extension	- genetic evidence (association) - reduced expression in postmortem brain from SZ patients - physiological and behavioural effects in mutant mouse	Yamada et al.[28] Lipska et al.[29]
<i>Grb2</i> [30]	17q24-q25	Nrg-EGF signaling	- no direct evidence, but interactions with multiple proteins associated with psychiatric illness, including DRD3, DRD4, PDE4D & ErbB receptors	Beard et al.[31]; Oldenhof et al.[32-33]; Corfas et al.[34]
<i>NDE1</i> [35-36]	16p13	Neuronal migration & neurogenesis	- genetic evidence (linkage)	Hennah et al.[37]
<i>NDEL1</i> [25,36,38]	17p13.1	Neuronal migration & neurogenesis	- reduced expression in postmortem brain from SZ patients	Lipska et al.[29]; Tomppo et al.[39]
<i>PAFAH1B1</i> [36]	17p13.3	Neuronal migration & neurogenesis	- reduced expression in postmortem brain from SZ patients	Lipska et al.[29]
<i>PDE4B</i> [40]	1p31.2	cAMP signaling	- genetic evidence (cytogenetics and association) - learning and memory alterations in Drosophila mutants - behavioural effects in mouse mutants - altered gene expression upon antidepressant treatment	Millar et al.[40]; Tomppo et al.[39]; Pickard et al.[41]; Kähler et al.[42]; Davis[43] O'Donnell and Zhang[44]; Siuciak et al.[45]; Zhang et al.[46]; Takahashi et al.[47]; Miró et al.[48]; Dlaboga et al.[49]
<i>TRAF3IP1</i> [25]	2q37.3	Signal transduction	- no direct evidence, but common interaction with DTNBP1, another major SZ risk gene	Camargo et al.[50]
<i>YWHAE</i> [51]	17p13.3	Signal transduction	- genetic evidence (association)	Ikeda et al.[52]
<i>ZNF365</i> [53]	10q21.2	Neurite extension & cell division	- suggestive genetic evidence (linkage & association)	Liu et al.[54]; Marcheco-Teruel et al.[55]; Segurado et al.[56]

^a References for interaction with DISC1 are given between brackets^b Data were reviewed in[57]^c As a hub protein, DISC1 is considered to be involved in all of the functions listed
