

Table S3. Clinical characteristics of control and Kidney transplant patients related in Figure S1.

	RTx cases (n = 15)	RTx cases (n = 14)	Controls (n = 11)
Immunosuppressive therapy regimen	CNI-based	CNI-free	
Ages, years	50 ± 12	57 ± 17	41 ± 9
Sex (M/F)	11/4	10/4	7/4
Time from RTx, months	84 (13 – 192)	27 (10 – 102)	n.a.
Enzymatic creatinine, mg/dl	1.8 (1.4 – 2.1)	1.5 (1.1 – 2.0)	1.0 (0.8 – 1.0)
eGFR, mg/min/1.73 m²	38 (34 – 50)	47 (36 – 60)	< 60

In cases of normal distribution: variables are presented as mean (±SD). In cases of skewed distribution: variables are presented as median (interquartile range). CNI, calcineurin inhibitor; eGFR, estimated glomerular filtration rate; RTx, Kidney transplantation. (n.a. = not applied).
