

Figure S4. Comparison of JD1 and 297 lp28-6 partition gene regions.

A dot matrix plot (generated by DNA Strider [1] with a 15 identities per 15 bp scanning window). There are only three differences between the two plasmids in the partition gene cluster ($jd1_z03-jd1_z06$ vs. $297_z01-297_z04$). The inset shows a magnified view of the difference in $jd1_z03$ (PFam49) and the sequences there are compared below, with the predicted $jd1_z03$ start codon in red and the tandem six bp Lys-Glu encoding repeats indicated by blue rectangles.
