

- | Enzymes                      |                                | Generic classes         |  |
|------------------------------|--------------------------------|-------------------------|--|
| Generic enzyme               | <b>KINASE</b>                  | Receptor ligand         | Transcription factor                     |
| Generic kinase               | <b>PHOSPHATASE</b>             | Protein                 | Cell membrane glycoprotein               |
| Protein kinase               | Generic phosphatase            | Compound                | Predicted metabolite or user's structure |
| Lipid kinase                 | Protein phosphatase            | Inorganic ion           | Reaction                                 |
| Generic phospholipase        | Lipid phosphatase              | DNA                     | RNA                                      |
| <b>PROTEASE</b>              | GTPase                         | Generic binding protein | <b>G protein adaptor/regulators</b>      |
| Generic protease             | G-alpha                        | G beta/gamma            | Regulators (GCL, SAR, GEF etc.)          |
| Metalloprotease              | RAS - superfamily              |                         |  |
| <b>Channels/Transporters</b> | <b>Receptors</b>               |                         |  |
| Generic channel              | Generic receptor               |                         |  |
| Ligand-gated ion channel     | GPCR                           |                         |  |
| Voltage-gated ion channel    | Receptors with enzyme activity |                         |  |
| Transporter                  |                                |                         |  |
