^a Effect allele is the smoking-increasing allele. Minor allele is in bold.

^b Linear regression model including SNP, gender, BMI at 31 years, three first PCs.

^c Interaction model including SNP, gender, BMI at 31 years, smoking (no, light, heavy), three first PCs, SNP*smoking. The interaction terms are for SNP*light smoking (A) and SNP*heavy smoking (B).

^d Adjustment for multiple testing by MaxT bootstrap test for gene-environment interaction.
