

**Supplementary Table S1**

	<b>No. of AP+ colonies well #1</b>	<b>No. of AP+ colonies well #2</b>	<b>Mean ± SD</b>	<b>Efficiency</b>
<b>Experiment 1</b>	<b>56</b>	<b>44</b>	<b>50 ± 8.5</b>	<b>0.05%</b>
<b>Experiment 2</b>	<b>88</b>	<b>88</b>	<b>88 ± 0</b>	<b>0.088%</b>

**Supplementary Table S1**

Number of alkaline phosphatase positive (AP+) colonies in two independent reprogramming experiments after 22 and 19 days after transduction, respectively. 100,000 iNSCs were plated in one well of a 6-well plate in duplicates and the reprogramming efficiency was calculated accordingly. SD: standard deviation.
