

Figure S10 - Comparison of self-consistency for GIANT and GPHMM using dilution

series data. Comparisons are conducted using the dilution series of CRL-2324 and CRL-2325 after removing the chromosome 6 and 16, which contain two aberration regions in normal cell line CRL-2325. Self-consistencies are calculated for both copy number (left) and LOH (right) identification by GIANT (blue) and GPHMM (red).
