

Supplementary Table 1. *Acinetobacter* sp. assessed by spot plate assay and efficiency of plating (EOP). Spot; + zone of lysis present, - no lysis observed. EOP; ratio of titre on test strain to titre obtained on propagating host as determined by overlay plaque assay, - no plaques observed. CL: International clonal lineage; CC: clonal complex; NA: not attributable.

<i>Acinetobacter</i> isolate	Relevant characteristics	Source	Spot assay	EOP
<i>A. baumannii</i> AYE	Dark colony morphotype; CL-I	ATCC BAA-1710	+	-
<i>A. baumannii</i> AYE	Light colony morphotype; CL-I	ATCC BAA-1710	+	-
