

S3 Fig. Evolution of the cell population as a function of alcoholic fermentation duration at high or low nitrogen level under : (A) (—) Ole-: Oleic acid starvation (18 mg/L), (B) (—) Erg-: ergosterol starvation (1.5 mg/L), (C) (—) Pan-: pantothenic acid starvation (0.02 mg/L) and (D) (—) Nic-: nicotinic acid starvation (0.08 mg/L). (○,○,○,○) indicate N-: low nitrogen (71 mg/L YAN); (◆,◆,◆,◆) indicate N+: high nitrogen (425 mg/L YAN). Fermentations were performed in duplicate.
