

**S3 Table. Comparison between the VEMP recorded from the lower limb muscle and the VEMP recorded from the cervical muscle in individuals with possible HAM (n=17) and with definite HAM (n=18).**

<b>Group</b>	<b>Response</b>	<b>VEMP recorded from the lower limb muscle</b>	<b>VEMP recorded from the cervical muscle</b>
<b>G3 - Possible HAM (n=17)</b>	<b>Normal</b>	6 (35)	13 (76)
	<b>Delayed latency</b>	10 (59)	4 (24)
	<b>Absent</b>	1 (6)	0
<b>G4 – Definite HAM (n=18)</b>	<b>Normal</b>	0	10 (55)
	<b>Delayed latency</b>	7 (39)	5 (28)
	<b>Absent</b>	11 (61)	3 (17)

Data are expressed as absolute number (percentage); n, number of participants with performed both VEMP recorded from the lower limb muscle and VEMP recorded from the cervical muscle.
