

(a)

(b)

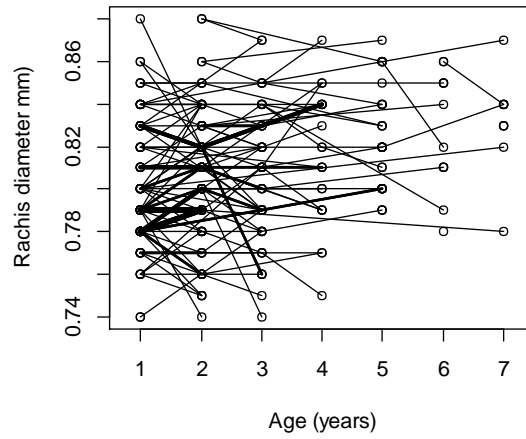

Figure S3. T5 Rachis dorsoventral width (mm) of different age categories of Sand Martins.

(a) For each age category (among-individual age effect: $P < 0.001$), (b) the same individuals at different ages are connected with lines (within-individual age effect: $P = 0.478$). Box plots show medians, quartiles, 5- and 95-percentiles and extreme values.
